PROFESSIONAL SUMMARY

AI/ML Engineer | Python & Django Backend Developer specialising in RAG pipelines, LangChain, CrewAI, OpenAI/Gemini APIs, and Prompt Engineering, with hands-on experience in REST APIs, Microservices, PostgreSQL, and Docker. 2 years in production at Google delivering measurable impact at scale.

SKILLS

- **Backend:** Python, Django, Django REST Framework, FastAPI, Pydantic, Flask, REST APIs, Microservices, Celery, Redis, Async Python, OOP, System Design, Agile methodologies, Git
- **Databases:** PostgreSQL, MySQL, MongoDB, SQLite, Vector DB (Pinecone, ChromaDB)
- **AI/Machine Learning:** RAG Pipelines, Prompt Engineering, LangChain, OpenAI API, Gemini, Groq API, Hugging Face, Transformers, NLP, Agentic AI, Fine tuning, Query Optimization, Neural Networks, TensorFlow, Keras
- **Cloud/Devops:** GCP, AWS (EC2, S3), Docker, CI/CD, GitHub Actions, Git, ETL Pipelines
- **Frontend:** React, Redux Toolkit, Vite, React Query
- **Concepts:** DBMS, Data Structures and Algorithms (DSA), Computer networks, SDLC, Operating Systems

WORK EXPERIENCE

Software Engineer | GlobalLogic (A Hitachi Group Company) – Onsite at GOOGLE

Sep'24-Present

Google AI Mode (AIM) & Search Enhancement

- Advanced Google's AI Mode search experience by contributing to the UberSearchTool, enhancing the LLM's ability to access and synthesize real-time data from diverse Google backends for millions of daily queries.
- Supported the Google Sports search vertical, ensuring the timely and accurate delivery of sports information to a global user base of millions across 10+ sports categories.

LLM Data Enrichment & Validation Frameworks

- Engineered an LLM-powered data enrichment pipeline with dynamic prompt chaining, improving structured data completeness and accuracy by an estimated 20-30% across thousands of daily records.
- Designed a multi-agent validation framework (dual LLM + golden dataset + consensus checks) to ensure high-quality outputs and reduce model hallucinations, improving output reliability by ~40%.
- Orchestrated the transition from Human-in-the-Loop (HITL) to fully autonomous validation workflows, accelerating processing throughput by 300-500% (3-5x) and contributing to over \$1M in annualized operational cost savings.

Query Understanding & Optimization

- Improved Sports query understanding by co-developing NLU pipelines in Intent Lab; work included grammar creation, entity annotation, and intent scoring, lifting feature triggering precision by 10-15% and recall by 5-10% for key query types.
- Implemented audit logging and async workflows, enhancing end-to-end traceability and reducing processing latency by an estimated 20-30%.

Engineering Leadership & Strategy

- Served as Point of Contact (PoC) for an 8-member engineering team, driving problem scoping, feature planning, data sourcing, and aligning project deliverables with engineering and product feasibility.

PROJECTS

AI-Powered Business Intelligence Assistant | Python · FastAPI · React · SQL · Llama3 · Groq API · Pandas

- Architected an AI-powered assistant enabling natural language querying across SQL databases, PDF reports, and CSV datasets — eliminating manual data lookup across 3+ source types.
- Developed a FastAPI backend with tool-based architecture for secure multi-source data retrieval and context-aware LLM orchestration using Groq Llama 3.
- Implemented retrieval-augmented generation (RAG) workflows with semantic search over vectorized documents, achieving sub-second query response times.
- Designed structured APIs using Pydantic validation, async endpoints, and modular backend architecture following production-grade best practices.

EDUCATION

Maulana Azad National Institute of Technology (MANIT), Bhopal

Master of Computer Application

[CGPA: 8.94]

[2021-2024]

CERTIFICATIONS

- Awarded R&R (Recognition & Reward) — Work-O-Joylic & Alpha Player Employee at GlobalLogic (Google Onsite)
- All India Rank 397 in NIMCET-2020 — National Level MCA Entrance Examination out of 50,000+ candidates.
